

AI Referral Letters

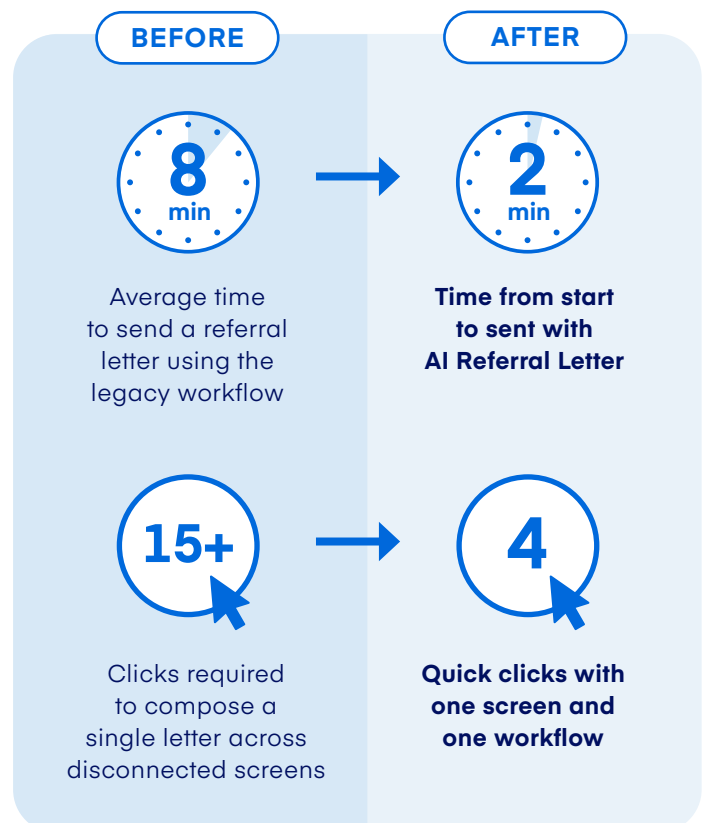

AI-GENERATED SPECIALTY REFERRAL LETTERS SO YOUR TEAM CLOSES THE COMMUNICATION LOOP WITHOUT ADDING STEPS TO THE DAY

Your specialists shouldn't have to choose between clinical thoroughness and a realistic workday.

For periodontists, oral surgeons, and endodontists, the referral letter is what closes the loop with the referring GP. When it doesn't arrive, referring doctors don't complain—they route fewer cases.

AI Referral Letter gives your team a complete letter in under two minutes—generated from chart data that's already there, with role controls that keep sign-off exactly where it belongs.

What Changes for Your Organization

WHAT YOU'RE DEALING WITH TODAY	WHAT YOU GET WITH AI REFERRAL LETTER
The referral letter takes 8 minutes your team doesn't have. Manually re-entering data that already exists in the chart is high friction.	Just four clicks for an AI-generated letter. AI reads the posted chart—ledger items, progress notes, treatment plan—and generates a complete, editable letter in under 15 seconds.
Without a clear delegation path, coordinators overstep or letters stall. Either way, it's a compliance gap waiting to happen.	Staff drafts. Providers approve. Save as Draft lets your coordinator generate and queue the letter. Clean, compliant, and traceable.
The referring GP gets an embedded image they can't extract or nothing at all. Imaging that can't be imported into their PMS isn't useful. It damages the relationship.	X-rays delivered as files. Attach imaging as downloadable files (JPG, PNG, PDF, TIFF). The referring dentist receives a secure magic link and can download images ready to import into their own PMS.
Referring GPs build relationships with specialists who close the loop consistently. Delayed or missing reports quietly erode that trust and the case volume that comes with it.	The communication loop is closed, every time. AI Referral Letter is native to Denticon so the full workflow lives where your team already works, making consistent communication the path of least resistance.

BUILT INTO DENTICON

AI Referral Letter launches from the Referral Management grid—no separate application, no new login. If the referral case is entered, your team is one click away.

AI reads posted ledger items, progress notes, and treatment plan entries for the exact date of service. Demographics, provider credentials, and clinical narrative populate automatically. **No re-entry. No blank pages.**
