

DentalOS® Platform

PRACTICE MANAGEMENT SOFTWARE WAS BUILT FOR A PRACTICE.
THE DENTAL ENTERPRISE PLATFORM WAS BUILT FOR MORE.

One platform. One data layer.

With 80+ integration partners and open APIs, operators choose the best-in-class tools that fit their organization.

Practice management software was built for a different era.

You're not managing a single practice—you're running an enterprise. No collection of separate tools, however capable individually, delivers what a unified platform does: organizational clarity that compounds across every location, specialty, patient relationship, and revenue stream.

DentalOS® connects practice management, imaging, orthodontics, payments, and AI with a single data layer—so growth adds leverage, not complexity.

WHAT YOU'RE DEALING WITH TODAY	WHAT YOU GET WITH DENTALOS
Cross-location reporting requires manual pulls and reconciliation. By the time the picture is complete, it's already stale.	Enterprise visibility that's structural, not scheduled. Production, collections, scheduling, and clinical data on one layer—no spreadsheet required.
Every acquisition inherits a new stack. Your team rebuilds integrations, retrains staff, and re-establishes standards from scratch.	Acquisitions onboard to a system, not a stack. Same platform, same workflows, same data model—average eight weeks per location for DSOs.
AI investments underperform because the data they need is split across systems that don't share a common record.	AI that works because the data foundation is connected. Imaging AI inside the chart, scheduling agents on real scheduling data, revenue cycle intelligence on real billing data.
Multi-vendor security means multiple audit cycles, multiple governance models, and a compliance surface area that grows with every system added.	One security framework across every product and location. Industry first to achieve SOC 2 Type 2 across the full suite, HIPAA compliant, PCI Level 2. One audit. One governance model.

14,500
practices

175,000
