

DentalOS® + Add-On Suites

One platform. Five suites. Every capability connected.

Built differently.

When new capabilities ship, they arrive inside the suite you're already on. No migration, no new vendor, no new purchase decision. The suites get more powerful every quarter.

One login

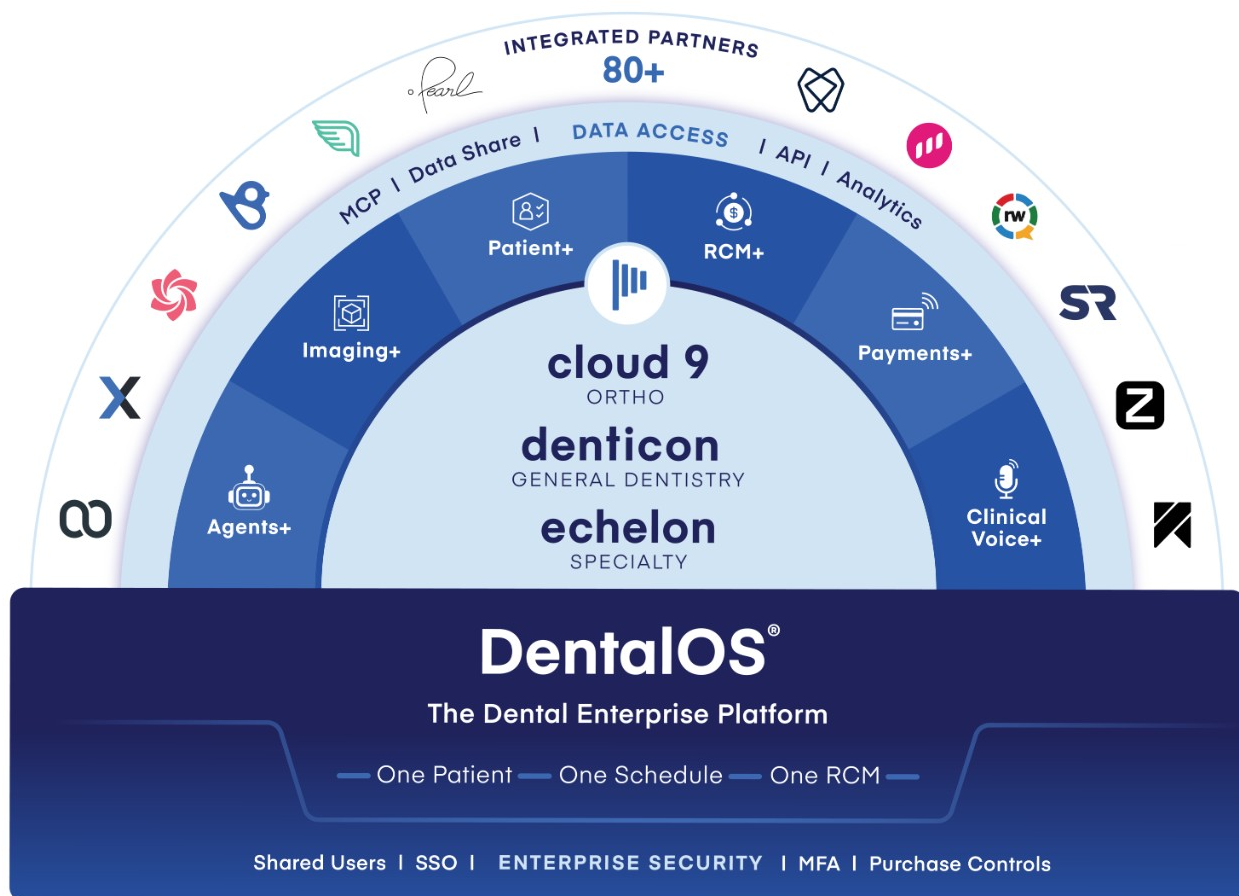

One credential, one interface—no integration tax.

Shared data layer

Clinical, billing, and scheduling data—connected automatically.

Every location

Runs consistently across your entire enterprise.

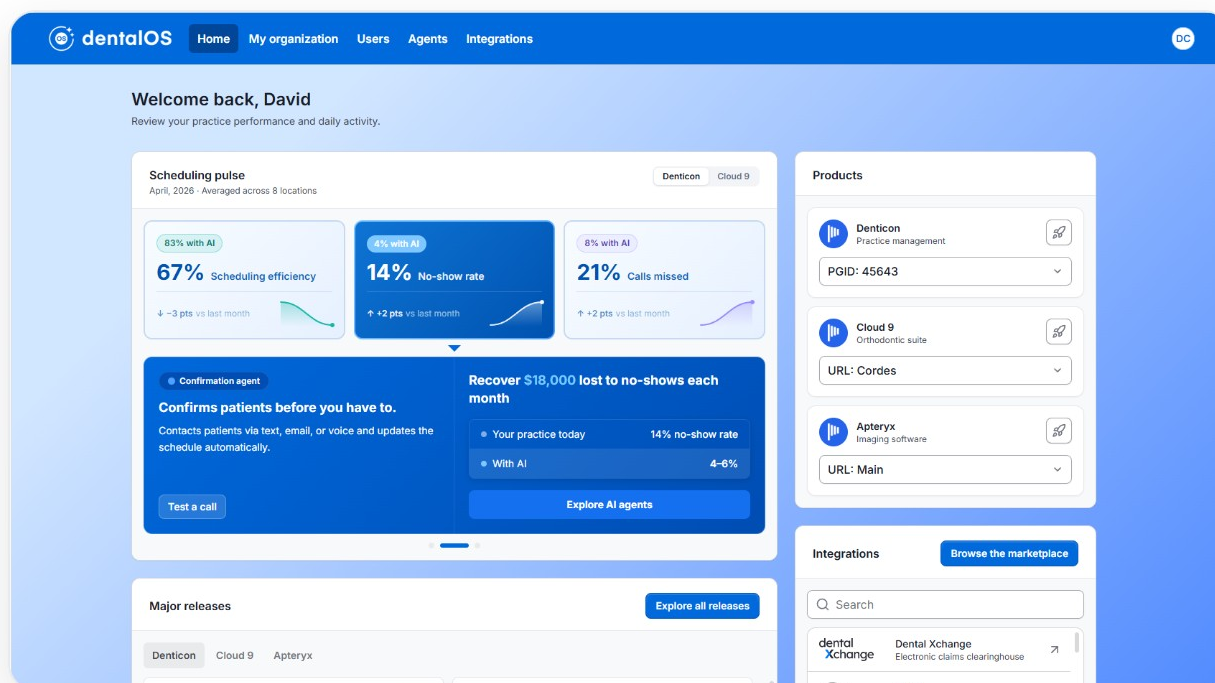

Add-On Suites

Five suites. Every capability connected.

Every suite runs on the same data layer, security model, and login your teams already use.

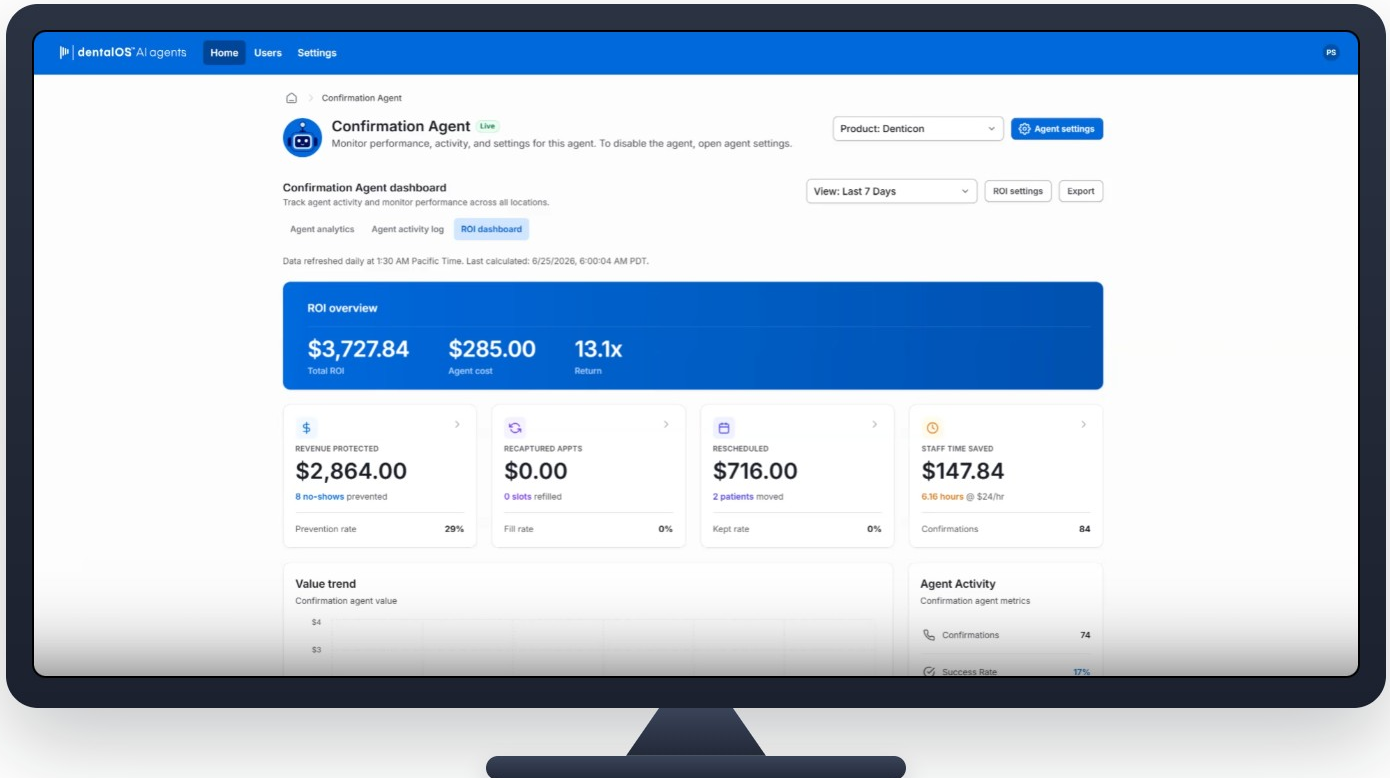

SUITE	WHAT IT SOLVES
Agents+	AI agents that make automated outgoing calls to confirm, recall, and rebook patients across every location
Clinical Voice+	Documentation overhead removed from every provider, every shift
Imaging+	Enterprise imaging infrastructure that scales without renegotiation
Patient+	A consistent patient experience across every location, automatically
Payments+	Embedded payments close the gap between collecting a payment and recording it

Agents+

Your front desk. Always on.

Agents+ brings AI agents to work alongside your team—handling the high-volume, repetitive workflows that multiply with every location, so your staff can focus on the patients in front of them.

WHAT AGENTS+ DELIVERS

AI Confirmation Agent

✓ AVAILABLE NOW

Timely automated confirmations—the agent handles responses, reschedules, and updates the schedule in real time.

Cancellation Rescheduling Agent

✓ AVAILABLE NOW

Works the waitlist and rebooks the chair before a gap becomes lost revenue.

AI Recall Agent

✓ AVAILABLE NOW

Finds overdue patients from the live record and runs outreach on your protocol—nights, weekends, between hires.

Missed Apt Rescheduling Agent

✓ AVAILABLE NOW

Immediate follow-up with no-shows before the slot is permanently lost.

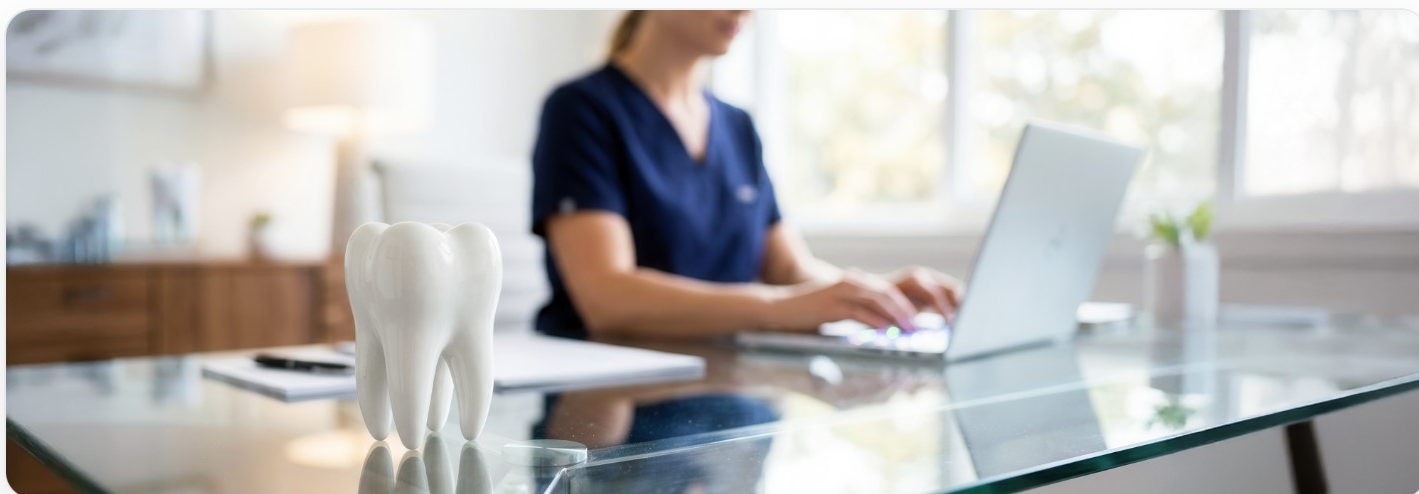

PLATFORM-NATIVE AI · DEPLOY ONCE, OPERATE EVERYWHERE

Every agent runs on live DentalOS schedules, patient records, and billing—no integration layer, no stale exports. Scheduling rules, tone, and escalation are configured centrally, applied at every location, and visible in your existing DentalOS reporting.

Clinical Voice+

Less charting. More care.

Clinical Voice+ gives every provider hands-free AI charting—so the day ends when the last patient leaves, not when the last note is finished.

WHAT CLINICAL VOICE+ DELIVERS

AI Voice Perio

✓ AVAILABLE
NOW

Pocket depths, bleeding, and recession called by voice—written directly into the perio chart. The chart is complete when the provider finishes speaking.

AI Voice Restorative Charting

✓ AVAILABLE
NOW

Restorative observations and treatment notes captured at the chair in real time. No catch-up charting. No re-entry.

AI Voice Progress Notes

✓ AVAILABLE NOW

Providers speak to document the visit inside Denticon and get a structured, review-ready progress note written directly into the chart in seconds. No separate app, no scribe, no after-hours catch-up.

MORE TIME WITH THE PATIENT FOR EVERY SHIFT

Faster documentation means more time with patients per shift—without adding providers or operatories.

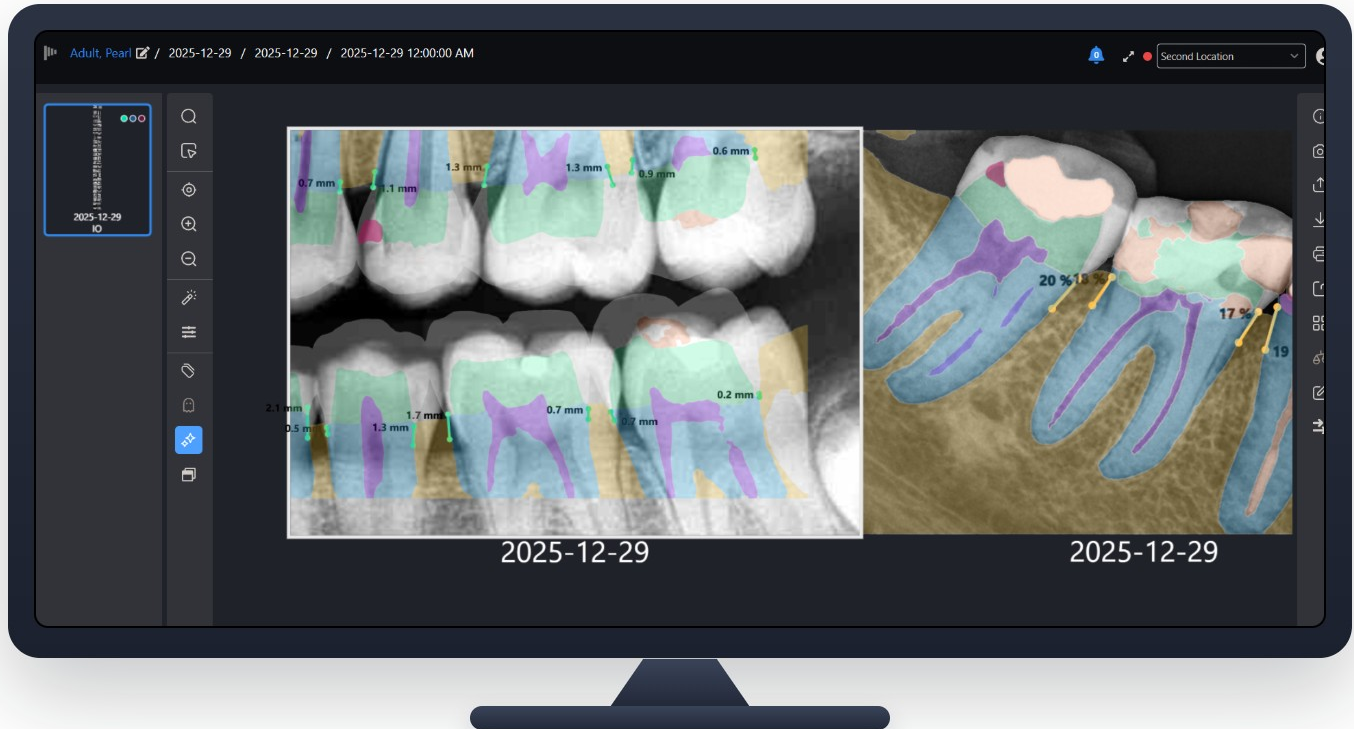

DOCUMENTATION CONSISTENCY

Consistent documentation across every provider and location—so no one is left catching up at the end of the day.

Imaging+

See more. Capture more. Miss nothing.

Imaging+ gives every provider enterprise-grade imaging infrastructure—expanded storage, advanced 3D, and analytics—all running inside DentalOS.

**Image analysis shown powered by Pearl AI. Available through the Planet DDS partner integration ecosystem.*

WHAT IMAGING+ DELIVERS

Expanded 2D storage (1 TB)

Enterprise-grade storage that scales with your network. Add locations and capacity grows with them—no renegotiation required.

Apteryx Analytics

Surface diagnostic patterns, provider output, and imaging utilization across every location.

Apteryx 3D Module

CBCT and 3D imaging accessible directly inside DentalOS. No separate software, no separate login.

Shared data layer

Findings appear in the patient record, treatment plan, and enterprise reporting—automatically. Nothing lives in a silo.

- Imaging+ removes per-location server infrastructure and replaces it with enterprise-grade capacity that grows with your organization automatically. **Configure once, deploy enterprise-wide.**

Patient+

Every patient, connected.

Patient+ turns patient communication from a staff-dependent task into a systematic process—one consistent experience running automatically across every location.

WHAT PATIENT+ DELIVERS

Online scheduling—MyTooth

✓
AVAILABLE

Self-service booking synced live to provider calendars. Patients schedule, reschedule, and complete intake online—reducing call volume and capturing appointments that would otherwise be missed. Updates write to the record instantly.

Digital intake & consent

✓
AVAILABLE

Configured once, deployed everywhere. Digital intake, consent, and medical history completed before the patient arrives, updating the record in real time. New locations inherit the standard automatically.

Automated marketing campaigns & recall

✓
AVAILABLE

Protocol-driven text and email reminders, confirmations, and recall outreach across every location—every day, without manual effort.

Treatment Presentation

➤ COMING
SOON

Chairside multi-plan presentation with built-in payment, financing, and live signature in one encounter. Higher case acceptance at the point of care, at every location.

- Imaging findings flow into the same patient record that Patient+ manages across every touchpoint—one complete picture of every patient, across every encounter.

Payments+

An embedded payments solution.

Payments+ eliminates the operational gap between payment collected and revenue recorded—automatically posting into Denticon or Cloud 9.

STRIPE READER S700

Accept chip, swipe, and contactless payments—no manual entry. It all posts straight to Denticon or Cloud 9.

WHAT PAYMENTS+ DELIVERS

Automatic posting

Payments post directly to the patient record at the moment of collection—against the appointment, the claim, and the clinical record. No manual entry. No data gap.

Flexible payment options

Credit, debit, ACH, and contactless including Apple Pay and Google Pay—across every location.

Card on file

Securely stored payment details for one-click payments at future visits. Less front-desk friction, fewer billing delays.

Automated financial campaigns

Automated text and email reminders for outstanding patient balances—running on your protocol across every location.

Surcharge capability

Processing costs offset systematically for credit card payments across every location and every transaction. No per-location decision required.

Reporting and reconciliation

Track and reconcile patient payment transactions—visible in the same reporting layer your team already uses.

- PCI-compliant encryption, fraud protection, and end-to-end data security.

DentalOS + Add-On Suites

The platform that runs the enterprise—not just the practice.

Every suite runs on the same data layer. Clinical data informs billing. Scheduling data powers AI agents. Imaging connects to the chart. Payments post at the moment of collection. The platform connects what fragmented tools never could.

The destination: a dental enterprise where operational noise disappears, RCM friction approaches zero, every specialty is connected, and the data accumulated across every location becomes a compounding competitive advantage.
