

Planet DDS Pay

Payment processing built inside Denticon and Cloud 9.
No separate processor. No manual entry.

Every new location multiplies the same manual work.

Payments outside your practice management system mean re-entering transactions, chasing mismatches, and redoing PCI paperwork at every new location.

Planet DDS Pay posts every payment straight to the patient ledger, so growth doesn't create more reconciliation work.

What Changes for Your Organization

WHAT YOU'RE DEALING WITH TODAY	WHAT YOU GET WITH PLANET DDS PAY
Every new location means redoing PCI paperwork and getting sign-off from IT and your CFO again.	PCI compliance handled once, not at every location. PCI-compliant, P2PE processing removes the repeated paperwork and sign-off required at every new location.
Legacy processor onboarding can take 4 to 6 weeks per location.	Onboarding in 1 business day, not weeks.* New-location setup is typically complete within 1 business day, replacing a multi-week legacy process.
Revenue reporting is stitched together from separate reports at every office.	One connected revenue report across every location. Practices get a patient-level revenue report they didn't have before, with flexible daily, weekly, or monthly views.
Payments outside the practice management system get re-entered and reconciled by hand.	Every payment posts where it needs to be. Embedded in Denticon and Cloud 9, every transaction posts to the ledger automatically.
Credit card processing fees erode margin, with no way to offset them without a separate vendor conversation.	Recover card processing costs, compliantly. A built-in, compliant surcharge lets practices recover processing costs without a separate vendor (configurable 0–3% by the org admin; debit, HSA, and FSA are always exempt).

Built to carry into Denticon and Cloud 9

No separate login, system, or terminal software to manage. Every transaction posts to the existing patient ledger. No re-entry, nothing to reconcile by hand.

New-location setup: complete within 1 business day,* so every location gets the same experience without a repeat implementation project.

Part of Payment+

The Payment+ suite brings every financial capability into Denticon and Cloud 9 natively starting with Planet DDS Pay and surcharge recovery. As new capabilities roll out, they add to the setup you already have.

*Standard onboarding buffer for scheduling and account activation; self-service configuration itself takes about 5 minutes. Add 2 to 3 business days for terminal shipping if a physical card reader is needed.

Have a location that's not on Denticon or Cloud 9 yet?

You don't have to wait.

New locations don't have to wait for a full PMS go-live to start collecting. The new standalone version of Planet DDS Pay lets a newly acquired office start processing payments from day one, with no Denticon or Cloud 9 onboarding required first. business day.*

The final setup for Planet DDS Pay is so much easier and smoother than our previous platform ... **I can do it myself in about five minutes.**
