

Centralized RCM with Denticon

One revenue cycle standard across every location. Collect more of what you produce, at a lower cost to collect it.

THE CHALLENGE

When RCM runs location by location, revenue does too.

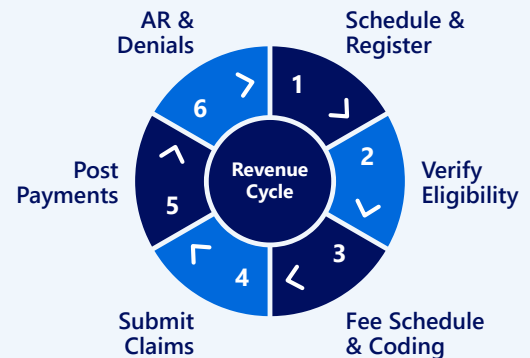

Every location running its own rules is another place for errors to start. That's process debt, and it compounds as you grow.

THE SOLUTION

Centralize the rules once. Enforce them everywhere.

Fee schedules Insurance plans Claims Posting AR

Built on a cloud-native platform for multi-location groups since 2003.

WHAT CENTRALIZING IS WORTH

65% → 85%

of patient balances collected before the patient leaves, after standardizing 12 systems on Denticon

Imagen Dental Partners, 130+ locations

20 hrs/week

saved on insurance payment posting with 835 auto-posting

West Coast Dental, 40-location DSO

\$890K

what centralized RCM could add to annual EBITDA for a group producing \$10M.

WHAT DENTICON CLOSES

Standards drift by location.

Rates and plans are managed differently everywhere.

The correct rate, across all locations.

Fee schedules and insurance plans are set at the corporate level, and Denticon applies the contracted rate by carrier, provider, and location.

AR problems found too late.

Write-offs are spotted after recovery is unlikely.

Exceptions surfaced before they age.

Insurance and patient AR are tracked by location, carrier, and aging bucket so leadership can act before balances become write-offs.

Manual work grows with every location.

Posting and eligibility checks eat staff time.

Routine work handled automatically.

Automatic ERA (835) posting closes routine claims without manual intervention, and AutoEligibility* checks eligibility before the patient arrives.

*AutoEligibility is an add-on to Denticon.
